## Ordering Information

Order by catalog number. Switches include frame and self protective (except TD) trip unit only. Order lugs separately from pages 6-70 to 6-72.

[^0]- Built to order. Allow 3-4 weeks for delivery.
(1)For 2-pole application use outside poles of 3-pole circuit breaker.
(2)For additional lugs see pages 6-70 to 6-72.

## Molded Case Circuit Breakers

## Digital Solid State Sentron Sensitrip III Series

The Sentron Sensitrip III circuit breaker is a true RMS current sensing device. Digital microprocessor circuitry within the electronic trip unit provides more precise control over the circuit breaker functions. This control allows circuit coordination flexibility not available with thermal magnetic circuit breakers

Functions available in Sentron Sensitrip circuit breakers.

| Catalog Number (Description + Suffix) | Trip Type | Cont <br> Current <br> Setting | Long Time Delay | Instantaneous Setting | Short <br> Time <br> Pick Up | Short Time Delay | Short <br> Time ${ }^{12} \mathbf{t}$ Pick Up | Ground <br> Fault <br> Pick Up | Ground <br> Fault <br> Delay |

SJD6, SHJD6, SCJD6, SCD6, SHLD6, SCLD6

$I_{n}=$ Maximum circuit breaker ampere rating
$I_{r}=$ Current Rating - a function of continuous ampere adjustment setting expressed in $\%$ of $I_{n}$.
$I_{g}=$ Ground Fault Pickup - a function of adjustment setting expressed in $\%$ of $I_{n}$.

## Digital Solid State Sentron Sensitrip III Series

D．Adjustable＂Short Time Pick－Up＂Switch（Optional） Sensitrip III circuit breakers with an adjustable short time pick－up switch allow for selection of short time pick－up in a range from 1.5 to 10 times the setting of the maximum current rating．
E．Adjustable＂Short Time Delay＂Switch（Optional）
Sensitrip III circuit breakers with an adjustable short time pick－up switch also contain a switch for adjustment in time delay．The adjustable short time delay switch allows for either of two modes of short time delays．One range of settings enables the breaker to be set for fixed time delays and the other range of settings enables the breaker to be set for short time delays based on $\mathrm{I}^{2} \mathrm{t}$ curves．
$I_{n}=$ Maximum circuit breaker ampere rating．
$I_{r}=$ Current Rating — a function of adjustment setting expressed in \％of $I_{n}$ ．
$I_{g}=$ Ground Fault Pick－up — a function of adjustment setting expressed in $\%$ of $I_{n}$ ．

## Examples of Adjustment Settings

## Catalog Number SMD69800A

|  | Continuous <br> Current Setting | Long Time <br> Delay Setting | Instantaneous <br> Setting |
| :--- | :--- | :--- | :--- |
| $\mathbf{I}_{\mathbf{n}}=\mathbf{8 0 0}$ | 30 | 12 | 8 |
| $\mathrm{I}_{\mathrm{n}}=800$ amperes | 240 amperes | 12 seconds trip | 1920 amperes |
| Results | at $6 \times 240$ amps $=1440$. | $8 \times I_{r}=8 \times 240$ |  |

## Catalog Number SMD69800ANGT

| $\mathrm{I}_{\mathrm{n}}$ | $\begin{aligned} & \mathrm{I}_{\mathrm{r}} \\ & \text { Setting } \end{aligned}$ | Long Time Delay | Short Time <br> Pick－Up <br> Off | Instantaneous Setting | Short Time Pick－Up On | Short Time Delay | $\begin{aligned} & { }^{12} \mathbf{T} \\ & \text { Set } \end{aligned}$ | Ground <br> Fault <br> Pick－Up | Ground Fault Delay |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 800 amperes Results | $\begin{array}{r} 70 \\ 560 \\ \hline \text { (2) } \end{array}$ | $\begin{aligned} & 20 \\ & 20 \mathrm{sec} . \\ & \text { ©. } \end{aligned}$ | $-$ | $10 I_{r}$ <br> 5600A | $8 I_{r}$ 4480A <br> © ${ }^{-}$ | $\begin{aligned} & .5 \\ & .5 \text { secs } \\ & \text { (2) } \end{aligned}$ | $.28 \text {. } 28 \mathrm{sec} @ 4480 \mathrm{~A}$ | $\begin{aligned} & 40 \\ & 320 \mathrm{~A} \end{aligned}$ | $\begin{aligned} & .2 \\ & .2 \mathrm{sec} \end{aligned}$ |

（1）$I_{n}=800$ amperes．
（2）$I_{r}=560$ amperes（ $70 \%$ of 800 ）．
（2）．Delay $=20$ seconds at $3360 \mathrm{amps}\left(6 \times \mathrm{I}_{\mathrm{r}}\right)$ ． Breaker will trip in 20 seconds with 3360 amperes．
（4）Short Time Pick－Up Off－Instantaneous can be used．
（5）．Instantaneous set at $10 \times I_{r}=10 \times 560=5600$ amperes．
（2）Short Time Pick－Up On－Set at $8=8 \times 560=4480$ amperes．
（2）－Short Time Delay $=.5$ seconds．（Definite Time）
Note：（8）\＆（8）are mutually exclusive．
（8）${ }^{2}$ t switch on .28 seconds＠ $6 \times 560=3360$ amperes． （Inverse time）
（2）－Ground Fault Pick－Up set at $40=40 \%$ of $\mathrm{I}_{\mathrm{n}}=320$ amperes．（Definite Time）
（0）．Ground Fault Delay set at .2 seconds．Breaker will trip in 200 milliseconds with a 400 ampere ground fault．
